

## MINDS WORK DEVELOPMENTS

### Pharmacy Management Software

**Dashboard** presents the basic overview of pharmacy with numbers, graphs and pie chart. It gives the information of total customers, total invoices, and alerts on out of stock and expired products.

The Monthly progress report and income expense report statistics provide useful information to the user.

**Invoice** allows user to add the customer and create a new invoice right on time. POS invoice gives an additional usage of barcodes.

The admin can also manage the invoices list and edit them as well.

GUI POS gives a different user experience to create invoice with product templates and barcodes as well.

**Customer** helps to add and keep track record of important customer data base with detailed information.

The user can also manage the list of customers by updating or removing the entries. The customer ledger gives additional useful information of debit, credit and balance.

It also shows the paid, unpaid, partially paid or overpaid customers.

**Medicine** is very useful functionality that permits the user to add any pharmacy product or medicine in a very detailed manner by adding the category, generic, batch #, manufacturer and strength.

**Manufacturer** allows user to add and manage the manufacturer details. It also shows manufacturer ledger.

**Purchase** functionality helps to add the purchases with batch #, stock quantity, and other required information.

**Stock report** shows the total values of stocks, and also available and sold stocks.

**Return** allows user to manage stock, wastage and manufacturer returns.
